Dear Hiring Manager,

I am applying for the Full Stack / Frontend / Backend Developer role at your organization. I have hands-on experience building modern web applications using the MERN stack, Next.js, React.js, Node.js, Express.js, and MongoDB.

I have worked on real client projects, including [NSWPL](#), a stationery and custom printing management platform with admin dashboard functionality, CRUD operations, email handling, and Cloudinary integration. I also developed [Pavaaha Enterprise](#), a Next.js-based platform that combines an eCommerce store and digital services website.

Along with freelance projects, I completed a Frontend Development internship at Zimyo Consultant Pvt Ltd, where I worked with React, Material UI, reusable components, and API integration in an agile development environment.

I enjoy building clean, responsive, and user-friendly applications while continuously improving my skills and learning modern technologies. I am eager to contribute to a development team where I can grow as a developer and deliver meaningful solutions.

I would welcome the opportunity to discuss how my skills and project experience can contribute to your organization. Thank you for your time and consideration.

Sincerely,

Rajesh Kumar Sarkar
